Setting up your new projector is simple. Take it one step at a time:

**Step 1**
From this type of source:
- laptop / notebook
- desktop computer

**Step 2**
Use this type of cable:
- VGA (RGB)
- HDMI

**Step 3**
Plug into your projector:
- DVD player / Blu-ray
- gaming console

Your audio signal should go directly from your source to your receiver:
- RCA audio (left & right)
- 1/8" audio minijack

...and, as always, make sure all equipment is plugged in and turned on.
